11th Young Planners Workshop 2022

Call for Abstracts and Workshop Programme

1 About the ECTP and the Young Planners Workshop

The ECTP-CEU (European Council of Spatial Planners – Conseil Européen des Urbanistes), founded in 1985, brings together 40.000 spatial planners with 27 professional town planning associations and institutes from 25 European countries.

It is an umbrella association providing its members with a common framework for planning practice, planning education, continuing professional development and the definition of professional responsibilities.

ECTP-CEU sets standards of education and conduct for the planning profession; identifies, celebrates and rewards examples of good planning all over Europe; and engages in dialogue with local, national and European governments.

In accordance with these objectives, the initiative of the Young Planners Workshop seeks to set out young planners' perspectives and experiences within the context of new European paradigms.

2 Project Description

Future of the Traces of Modernity:

Public Mass Housing Neighbourhoods

Housing in European cities, especially in its central and eastern part, was developed as mass-housing based on denying the principles of street and places — the basic structures forming the city. Due to socio-economical changes, these residential city parts are facing massive pressure to be re-designed and redeveloped. As for they are not new — fresh developed city parts based on green land — but already inhabited and functional parts of the city, it is not easy to find the ways of transformation as well as the vision, how they should be transformed.

The theme is divided into two parts:

- Urban development philosophy;
- Practical ways of planning methods how to achieve it.

The workshop will be focused on finding the vision and the goals to be reached in the first step and then — according to the spatial requirements of the vision — setting the rules and

tools of spatial planning how to reach them.

The vision should include current principles of city planning, social inclusion, ecological and economic sustainability.

Principles of city planning

- Integration of urban functions and services, such as housing, work and leisure
- Pedestrian and cyclists are priority
- Design of public spaces

Social inclusion

- Mixed structure of inhabitants (different housing needs)
- Involvement of citizens and inhabitants, public participation

Ecological principles

- Rainwater management
- Heat island minimalization
- Natural parks and encaves

Economic principles

- Value for money
- Commercial and public activities
- Community planning

Participants of the workshop should use local areas based on exact needs and local conditions.
